CST-150 Activity 3

Code Screenshot 1

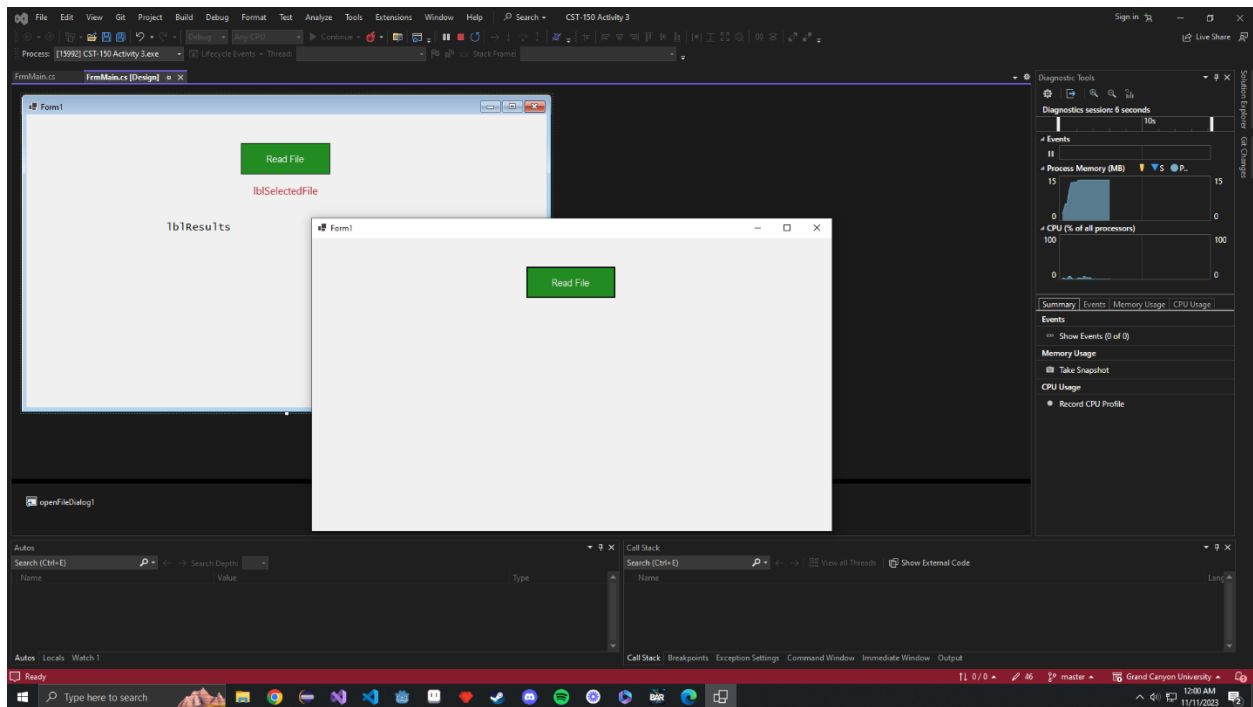

Shows the citation, initial setting of lbl's to hidden, and the variable declaration part of the btnReadFile click event. From the flowchart, covers everything up to the "is btnReadFile clicked?" box thing.

Code Screenshot 2

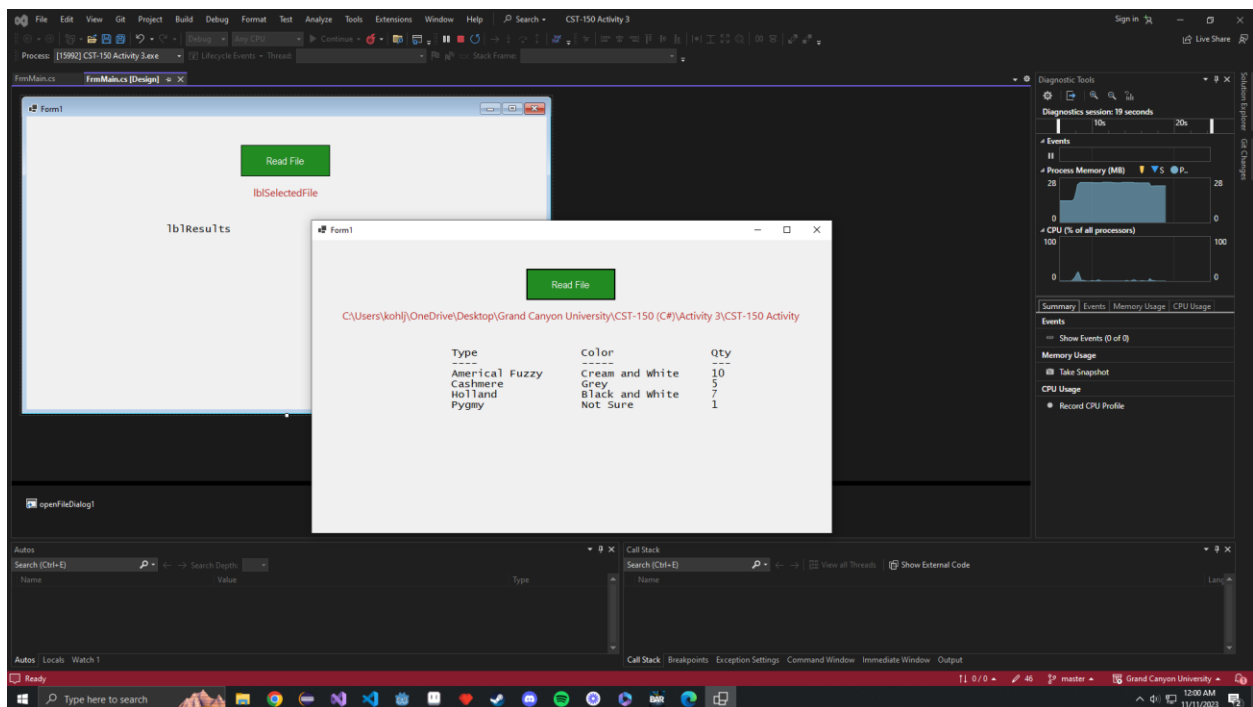

Covers the file selection, reading, splitting, and display portion of the flowchart. String formatting is still confusing to me. Going to need to watch some YouTube tutorials. Haha.

Pre-Populated Form Screenshot

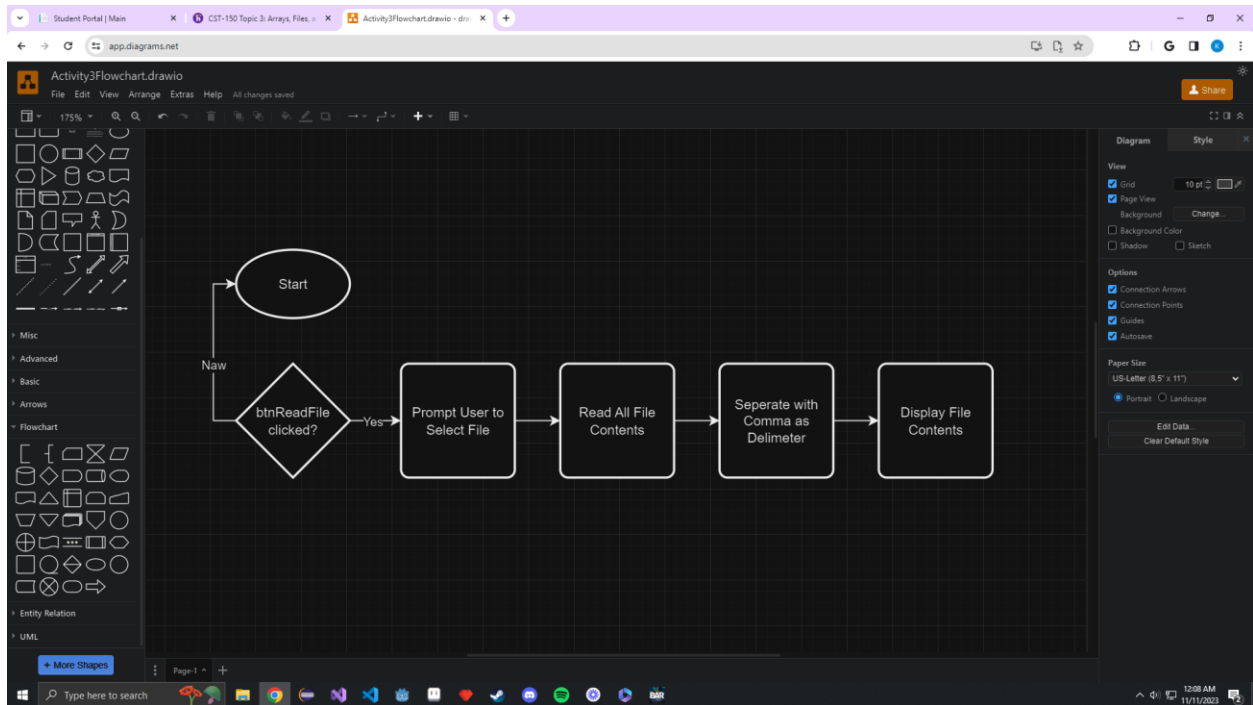

Just a white screen and a green button that sticks out like a sore thumb.

Populated/Output Form Screenshot

Shows the results from the supplied .txt file. The file path is cut off because my actual FilePath is ridiculously long thanks to OneDrive.

Flowchart Screenshot

So, instead of exporting the flowchart as a .png, I realized I could just screenshot the browser window and have a bigger and better quality image.
